

# Waverley Underpass

## Construction Update #10 - Project Completion

Winter 2019-2020

Issued November 4, 2019

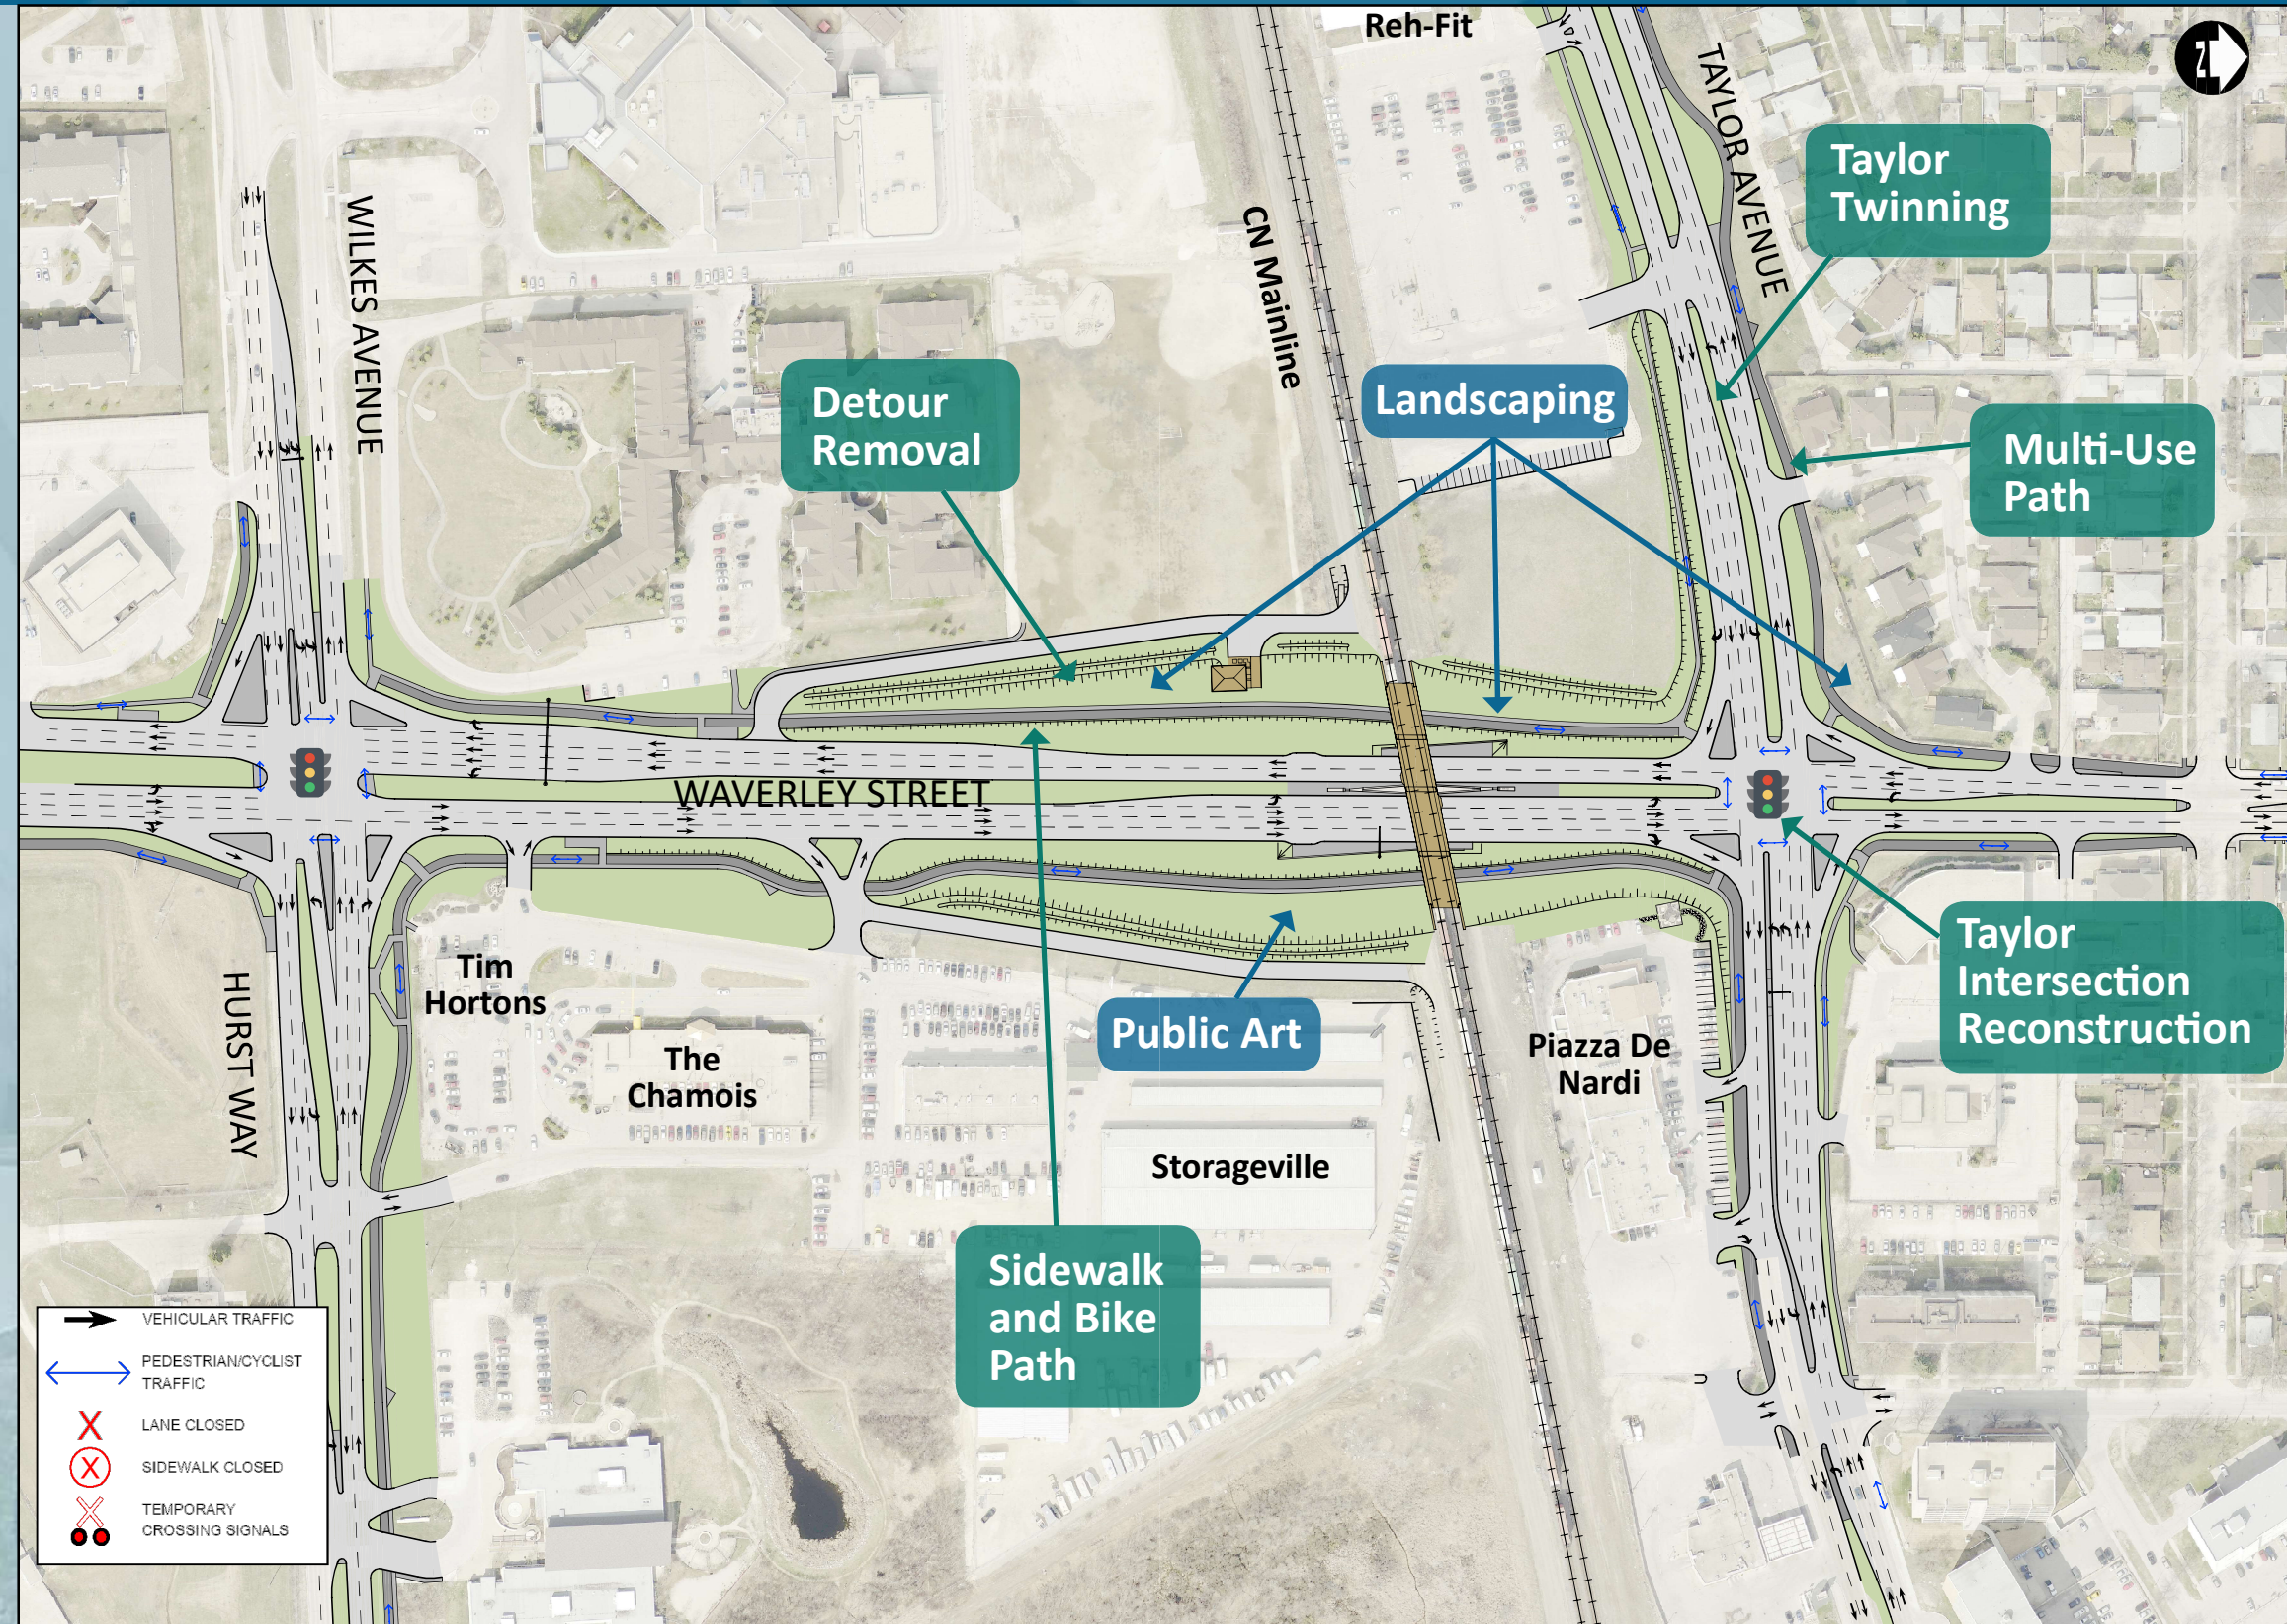

We are excited to announce that as of November 2019, the project is essentially complete. All traffic lanes, sidewalks, and bike paths are now open. We would like to thank everyone for their patience and understanding during construction. This is the final Construction Update for this project.

### Construction Work To Date

Since the underpass first opened on August 18th, 2019, we removed the detour road, reconstructed the Taylor intersection, and constructed a sidewalk/bike path on the west side of Waverley Street. All four lanes of Taylor Avenue are now open along with the new parallel multi-use path.

### Upcoming Works

All traffic lanes and active transportation facilities will be open through the winter. In Spring/Summer of 2020, final landscaping will occur. This will include placement of grass, trees, and shrubs throughout the project area. Of note, public art will be installed along the sidewalk/bike path on the east side of Waverley Street. Some landscaping works will require short term lane and sidewalk closures for contractor access and safety.
