PART E - SPECIFICATIONS

GENERAL

E1. GENERAL

E1.1 These Specifications shall apply to the Work.

E2. GOODS

E2.1 The Contractor shall supply and deliver a combination air relief valve (Valmatic model 208C) or equivalent with the following salient features, and in accordance with the requirements hereinafter specified.

E2.1.1 Valves shall be automatic float operated valves designed to exhaust large quantities of air during the filling of a piping system and close upon liquid entry. The valve shall open during draining or if a negative pressure occurs. The valve shall also release accumulated air from a piping system while the system is in operation and under pressure. The valve shall perform the functions of both Air Release and Air/Vacuum Valves and furnished as a Single Body or Dual Body Type as indicated on the plans.

E2.1.2 The combination air relief valve shall have bolted flanged inlets and plain outlets and protective hoods to prevent debris from entering the valve. Flanges shall be in accordance with ANSI B16.1 for Class 250 iron flanges and ANSI B16.5 for Class 300 steel flanges.

E2.1.3 The combination air relief valve shall have two additional NPT connections for the connection to gauges, testing and draining.

E2.1.4 The combination air relief valve shall provide a thorough flow area equal to the nominal size. Floats shall be unconditionally guaranteed against failure including pressure surges. The cover shall be bolted to the body and sealed with a flat gasket. A resilient bumper shall be provided on 4 in. (100 mm) and larger sizes to cushion the float during sudden opening conditions. The resilient seat shall be replaceable and provide drop tight shut off to the full valve pressure rating.

E2.1.5 The combination air relief valve shall consist of an Air Release Valve piped to an Air/Vacuum Valve with a quarter-turn, full-ported ball valve.

E2.1.6 The combination air relief valve shall have a leverage mechanism with sufficient mechanical advantage so that the valve will open under full operating pressure. Simple lever designs shall consist of a single pivot arm and a resilient orifice button. Compound Lever Designs shall consist of two levers and an adjustable threaded resilient orifice button.

E2.1.7 The combination air relief valve shall have a cover fitted to the valve body by means of a machined register to maintain concentricity between the top and bottom guide bushings at all times. The float shall be double guided with a guide shaft extending through the float to prevent any contact with the body. The float shall be protected against direct water impact by an internal baffle bolted to the cover or integrally cast in the body. The seat shall be a minimum of .5 in. (12 mm) thick on 2 in (50 mm) and larger valves and secured in such a manner as to prevent distortion. Valves with working pressure above 400 psig (2780 kPa) shall have metal seat with synthetic seals.

E2.1.8 The combination air relief valve body and cover shall be constructed of ASTM A126 Class B cast iron for Class 125 and Class 250 valves. Class ductile iron valves shall be constructed of ASTM A536 Grade 65-45 12 ductile iron. Dual Body Class 300 steel valves shall be constructed of ASTM A216 Grade WCB cast steel.

- E2.1.9 The float, guide shafts and bushings shall be constructed of Type 304 stainless steel. Non-metallic floats, linkage, or bushings are not acceptable. Resilient seats shall be Buna-N. Class 300 steel Dual Body Valves shall have a 304 stainless steel seat with Buna-N seal to provide an initial contact to Buna-N with a final metal-to-metal contact to prevent over compression of the resilient seal.
- E2.1.10 The manufacturer shall demonstrate a minimum of five (5) years experience in the manufacture of the combination air relief valve. The valves shall be manufactured and tested in accordance with American Water Works Association Standard (AWWA) C512.
