40	65 Allard	Westwood Library	Main Floor Plan
41	955 Cottonwood	Windsor Park Library	Basement Floor Plan

Revise: E4.1(a) to read: The City has standardized on the Cisco Aironet 1232 802.11a/g dual-radio Access Point. **Bidders are not required to bid this Access Point but if they do, the City may wish to purchase the Access Points independently and outside of this contract because of pricing advantages, and subsequently reduce the contract price accordingly.**

Revise: E4.4 to read: Optionally the System should check a user's Internet access rights as set on the Library's integrated system prior to providing access to the System. There are currently three settings available to Library users: a) adult filtered access, b) children's filtered access and c) no internet access. Those users that are set to no internet access will be denied access to the Internet but can still gain access to the garden wall area as outlined in E9.4. The Bidder must indicate if the proposed solution can be modified to provide this feature at selected sites and at what cost. **The current system utilizes a standard database engine and no application programming interface exists to facilitate database access. Custom programming would be required from the bidder using a supplied ODBC connection. An alternative source of information would be required in the event that the database is not available.**

Revise: E4.6 to read: The City will be responsible for providing the network connection to the Access Points. **The connection will be a standard RJ45 connection to a 10/100 Ethernet switch utilizing a dedicated VLAN. A total bandwidth of 10MB will be available to service all four(4) VLANS serviced at each location.**

Revise: E4.19 to read: Describe the peer-to-peer connectivity capabilities of the proposed System. **Indicate if this service can be disabled/prevented.**

Revise: E5.4 to read: The Bidder may be required to issue separate monthly payment cheques to each City department/division that is participating in this contract based on the service points identified. Every attempt will be made to simplify the process. **It should be noted that all Library branches reside within one(1) City department/division.**

Revise: E8.2 to read: The Bidder must provide the City support for the System and a single point of contact for reporting service problems. Outline the System support services provided for the City. **Outline any Library staff that may be needed in assisting with the system support. The Library has a central IT Help Desk and has Client Support Persons assigned in each branch to assist the Help Desk, if needed.**

Revise: E9.5 to read: Optionally, the System should be capable of directing user traffic through the appropriate Library Internet filtering appliance based on the users Internet access code that exists on the Library's database. The Library currently uses a filtering appliance to service its hardwired equipment. This appliance will apply the appropriate filtering policy based on the IP address of the device requesting access. The Library's database is currently a Sybase system. **The filtering appliance acts as a proxy server and applies filtering policies based on IP addresses.**

Add: **E11 STATISTICS**

Add: E11.1 The total number of PC bookings of bookable public access PCs is averaging approximately 30,000 per month and has for some time.

Add: E11.2 The Millennium Library, previously the Centennial Library, was averaging approximately one million visitors a year. Visitor counts for the rest of the branches is not currently available.

Add: E11.3 The Library currently has over 400,000 registered borrowers.

DRAWINGS

Add: Drawing 1 to Drawing 41(Floor Plans for each of the twenty library branches)
