E11.5.1 The supply and installation of the pavement repair fabric will be measured on an area basis and paid for at the Contract Unit Price per square metre for "Pavement Repair Fabric".

The area to be paid for will be the total number of square metres of pavement repair fabric supplied and installed in accordance with this specification, accepted and measured by the Contract Administrator.

#### E12. RECYCLED CONCRETE BASE COURSE MATERIAL

#### DESCRIPTION

#### E12.1 General

E12.1.1 Further to CW 3110, this specification covers supply and placement of recycled concrete base course material for Full-Depth Partial Slab Patches (Class A, B, C, & D), miscellaneous concrete slabs and sidewalks.

#### E12.2 Definitions

E12.2.1 Deleterious material – are materials such as vegetation, organic material, wood, glass, plastic, metal, reinforcing steel, building rubble, brick, salvaged asphalt materials, clay, shale, and friable particles.

## E12.3 Referenced Standard Construction Specifications

- (a) CW 3110 Sub-Grade. Sub-Base and Base Course Construction.
- (b) CW 3230 Full-Depth Patching of Existing Pavement Slabs and Joints.
- (c) CW 3235 Renewal of Existing Miscellaneous Concrete Slabs.
- (d) CW 3325 Portland Cement Concrete Sidewalk.

# **MATERIALS**

- E12.4 Recycled Concrete Base Course Material
- E12.4.1 Recycled concrete base course material when used for Full-Depth Partial Slab Patches (Class A, B, C, & D), miscellaneous concrete slabs and sidewalks will be considered equal to granular or limestone base course material specified in Section 2.2 of CW 3110.
- E12.4.2 Recycled concrete base course material will be approved by the Contract Administrator.
- E12.4.3 Recycled concrete base course material will consist of sound durable particles produced by crushing, screening, and grading of recovered concrete materials, free from soft material that would disintegrate through decay or weathering.
- E12.4.4 The recycled concrete base course material will be well graded and conform to the following grading requirements:

Recycled Concrete Base Course Material Grading Requirements

CANADIAN METRIC	PERCENT OF TOTAL DRY
SIEVE SIZE	WEIGHT PASSING EACH SIEVE
20 000	100%
5 000	40% - 70%
2 500	25% - 60%
315	8% - 25%
80	6% - 17%

E12.4.5 Recycled concrete base course material when subjected to the abrasion test will have a loss of not more than 35% when tested in accordance with grading B of ASTM C131. Test

for Resistance to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine.

E12.4.6 The amount of deleterious material will be limited to a maximum of two percent of the total dry weight.

# **CONSTRUCTION METHODS**

- E12.5 Placement of Recycled Concrete Base Course Material
- E12.5.1 Place and compact recycled concrete base course material as a levelling course to a maximum thickness of 50 millimetres.
- E12.5.2 Spread materials uniformly to avoid segregation free of pockets of fine and coarse material.
- E12.5.3 Level and compact to the finished elevation. Compact to 100% Standard Proctor Density for Full-Depth Partial Slab Patches (Class A, B, C, & D) and 90% Standard Proctor Density for miscellaneous concrete slabs and sidewalks.
- E12.5.4 Maintain the finished material until the pavement or sidewalk is placed.

# MEASUREMENT AND PAYMENT

- E12.6 Recycled Concrete Base Course Material
- E12.6.1 The supplying, placing and compaction of recycled concrete base course material will be measured on a volume basis and paid for at the Contract Unit Price per cubic metre for the "Supplying and Placing Base Course Material" as specified in accordance with CW 3110.
- E12.6.2 No measurement or payment will be made for material placed as a levelling course under miscellaneous concrete slabs and sidewalks where the costs are included in accordance with CW 3235 and CW 3325.
- E12.6.3 No measurement or payment will be made for materials rejected by the Contract Administrator.

#### E13. PLANING OF EXISTING MONOLITHIC BARRIER CURB

- Existing monolithic concrete barrier curb shall be removed by planing with self-propelled planning equipment. The Contractor, if he chooses, may break the top 100 mm of the existing monolithic concrete barrier curb prior to the planing of the curb. Breaking the top 100 mm shall be considered part of the planing process and no additional payment shall be made. Following completion of planing, the existing curb shall be a minimum depth of 50 mm below finished grade or as directed by the Contract Administrator. Planing of existing monolithic concrete barrier curb will be measured on a length basis and paid for at the Contract Unit Price per metre for "Planing of Existing Monolithic Concrete Barrier Curb". The length to be paid for will be the total number of metres of curb planed in accordance with this Specification, accepted and measured by the Contract Administrator.
- E13.2 If reinforcing steel is found to be present in the curb, removal shall be completed as per SD-206A, Alternative 2. Removal of curb containing reinforcing steel will be measured on a length basis and paid for at the Contract Unit Price per metre for "Concrete Curb Removal, Barrier (Integral)".

# E14. SEEDING

E14.1 Further to CW 3520-R7 and CW3540-R5, this specification covers the supply and placement of grass seed and preparation of existing grade for regional street boulevards and medians.

# E14.2 Grass Seed

Add revised grass seed mixture to clause 5.3 of CW 3520-R7:

"For regional street boulevards and medians a mixture composed of:

Seventy percent (70%) Fults Alkaligrass (Puccinellia distans), twenty percent (20%) Audubon or Aberdeen Creeping Red Fescue and ten percent (10%) Perennial Ryegrass."

# E14.3 Seeding

Replace first paragraph of clause 9.5 of CW 3520-R7 with the following wording:

"Grass seed will be sown at a rate of 2.2 kilograms per 100 square metres."

# E14.4 Preparation of Existing Grade

Add paragraph to clause 9.2 of CW 3540-R5:

"Prior to placing topsoil for seeded areas, all sub-grade areas for regional street boulevards and medians except in areas within the edge of a tree canopy (or drip line) shall be scarified or pulverized to a minimum depth of 50 mm."

The geotechnical report is provided to aid in the Contractor's evaluation of the existing pavement structure and/or soil conditions. The information presented is considered accurate at the locations shown on the Drawings and at the time of drilling. However, variations in pavement structure and/or soil conditions may exist between test holes and fluctuations in groundwater levels can be expected seasonally and may occur as a result of construction activities. The nature and extent of variations may not become evident until construction commences.
