Darren Burmey, P. Eng., Bridge Projects Engineer, City of Winnipeg

Email: dburmey@winnipeg.ca

Telephone No. 204 986-5409

Facsimile No. 204 986-5302

D2.2 All correspondence or contact by Proponents with the City in respect of this RFP must be directly and only with the City's Project Manager. Failure to restrict correspondence and contact to the Project Manager may result in the rejection of the Proponents Proposal Submission.

D2.3 At the pre-commencement meeting, the Project Manager will identify additional personnel representing the Project Manager and their respective roles and responsibilities for the Services.

D2.4 Proposal Submissions must be submitted to the address in B6.10

D3. BACKGROUND

D3.1 The existing St. James Street Bridge over Omand's Creek is a 15.24 m single span bridge comprised of multibeam concrete precast prestressed channel girders, an asphalt wearing surface, concrete curbs, and steel guardrails supported on cast-in-place abutments founded by 400 mm hexagonal precast concrete driven piles. The existing structure was constructed in 1968.

D3.2 The existing bridge is in poor condition, load-restricted to 36.5 tonnes, and does not meet current roadside safety standards. Rehabilitation or replacement is required. A minimum design service life of 50 years is required.

D3.3 During asphalt resurfacing works of St. James Street in 2007, the tops of the concrete channel girders were exposed confirming that they are in poor condition and not feasibly salvageable through rehabilitation.

D3.4 Two alternatives are to be considered. First, replace the structure with a cast-in-place concrete box culvert similar to structures further downstream. The second alternative is to rehabilitate the substructure units and replace the superstructure.

D3.5 The existing road cross section including west sidewalk is to be improved as much as practical including expanded sidewalk widths and addition of roadside safety measures, if necessary. A new sidewalk is to be provided on the east side of St. James Street from Dublin Ave to Bangor Ave as part of this project.

D3.6 A number of utilities are present at the site which may influence what may be the preferred alternative.

D3.7 The project will be carried out in a staged approach with preliminary design, detailed design, and contract administration phases.

- D3.8 It is anticipated that preliminary design would assess existing conditions and confirm the best way to proceed. Preliminary design would be completed in the Spring of 2013 and detailed design over the Summer and Fall enabling rehabilitation or replacement of the structure over the winter of 2013/14 while the creek bed is frozen.
- D3.9 It is anticipated that a full closure of St. James Street during the construction period will be permitted.
- D3.10 Limited public communication programs to identify, contact, and inform stakeholders would be needed. The hosting of a public information evening is also envisioned.

D4. SCOPE OF SERVICES

- D4.1 The Services required under this Contract shall consist of the preliminary design, detailed design, and contract administration of the rehabilitation/replacement of the St. James Bridge over Omand's Creekin accordance with the following:
- (a) Preliminary Design as outlined in D5.
 - (b) Detailed Design as outlined in D6.
 - (c) Contract Administration as outlined in D7.

 - (g) Determine regulatory approval requirements including those with City of Winnipeg Waterways, Provincial Waterways, Manitoba Conservation, Department of Fisheries and Oceans (DFO), and requirements for any other regulatory approvals that may be necessary.
 - (h) Confirm road and sidewalk requirements with the City of Winnipeg. It is anticipated that a new sidewalk on east side of St. James Street from Dublin Ave to Bangor Ave will be included in this project.
 - (i) The crossing shall be capable of supporting CL-625 design load in accordance with the Canadian Highway Bridge Design Code, S6-06.

- (j) The bridge rehabilitation design shall be undertaken in accordance with Clause 14 of CAN/CSA-S6-06. The design live load vehicle shall be the CL1-625. In addition, the rehabilitated structure shall be capable of carrying all legal loads up to a 62 500 kg G.V.W. on an unrestricted basis. Reliability indices, highway classes, and load factors shall be mutually agreed with the City prior to the start of detailed analysis.
- (k) The structure shall also be evaluated to determine its ability to carry three different overload truck configurations with G.V.W.'s of 81 090 kg, 124 057 kg and 166 060 kg. Confirmation of the exact configurations shall be in consultation with City staff. A recommendation shall be made as to whether these overloads can be allowed on an Annual, Bulk, Controlled, or Single Trip Permit basis.
