D3. BACKGROUND

D3.1 The existing Portage Ave over Sturgeon Creek Twin Bridges are 3 span continuous (10 m end spans, 18m centre span) laterally post-tensioned, multibeam, precast, prestressed concrete box girders with a 150 mm cast-in-place concrete deck, concrete median, shoulders barriers and sidewalk supported on a cast-in-place concrete piers and abutments founded by 305 mm hexagonal precast concrete driven piles. The existing structure was constructed in 1981.

D3.2 The existing bridge is generally in fair condition with the exception of the shoulder barriers, sidewalk, approach slab, abutment backwalls which are in need of rehabilitation. Morrison Hershfield Limited has completed a condition assessment and preliminary design of remedial measures. Their report is included in Appendix C.

D3.3 It is the City's intent that the rehabilitated bridge will have a minimum useful service life of 50 years following the recommended rehabilitation work in the preliminary design report.

D3.4 It is envisioned that all work will be carried out on City property and no construction easements will be required.

D3.5 It is envisioned that the work can be done in a staged fashion to have at least 4 lanes on Portage Avenue open to traffic at all times. Traffic analysis would be required to quantify the effect on traffic and to determine what measures may be implemented to minimize traffic flow disruptions.
