 - E3.1.3 Units shall have a diode string failure rate of no more than "1 for 4", that is, for any individual diode failure no more than four (4) diodes may be out unless the ITE specification for LED signals specifies a lower amount.
 - E3.1.4 Design of symbols shall conform to ITE standards for Circular Red/Amber/Green and Hand, Walking Man (outline only to conform to the Canadian Standard).
 - E3.1.5 Units shall operate from 90 to 135 volts RMS AC (60 Hz), from minus 40 to plus 165 degrees Fahrenheit and from zero to one hundred percent humidity.
 - E3.1.6 Units shall have a sharp voltage turn-off characteristic, decaying to less than 15 volts AC. RMS within 200 milliseconds of removal of power, over the full 90 to 135 volts AC specified operating voltage range, so as to not to cause false triggering of a signal Conflict Monitor device due to extended turn-off voltage decay.
 - E3.1.7 When connected to a Model 200 Switch pack in the OFF condition (as used in the 170 type controller 33X control cabinet), units shall not show any visible light. (Evaluation of this requirement shall be undertaken in total darkness).
 - E3.1.8 Each unit shall be identified with manufacture's name, wattage, voltage range, date of manufacture and serial number.
 - E3.1.9 All circuit boards, including the LED mounting circuit board shall be conformal coated.
 - E3.1.10 All BiModal Pedestrian Display units must have a UV rated 10-15 mm wide self-adhesive neoprene gasket strip applied completely around the perimeter on the display (front) face of the LED module. This gasket will provide resistance to environmental effects (moisture /

wind / heat) when securely mounted in the door of City of Winnipeg standard pedestrian head housing(s).

- (a) With uncompressed gasket affixed, the depth of the front face of the gasket material to the back side of the LED display face (at the mounting corners) must be between 10 mm and 12 mm thick.
- (b) With uncompressed gasket affixed, the physical depth of the front face of the gasket material to the back side of the LED display module must be less than 10 cm (excluding wiring leads / harness).

E4. PERFORMANCE RELIABILITY

- E4.1 The responsibility for the design of the complete unit, warranty and performance reliability shall rest upon the Contractor.
- E4.2 The term “*repeat failures*” as used herein is defined to mean that the same component, subassembly, or assembly develops repeated defects, breakdowns and/or malfunctions rendering the unit inoperative, or required repeated shop correction, service and/or replacement during the warranty period applicable for said component, subassembly, or assembly. Minor items or ordinary service adjustments are not included, or considered under the scope of “repeated failures”, as well as other factors, such as operational damage due to accidents, misuse or lack of proper maintenance and service attention by not following the manufacturer’s preventative maintenance schedules.
- E4.3 Where the unit develops “repeated failures” in service, the Contractor shall make any necessary engineering changes, repairs, alterations or modifications in order to guarantee reliability of performance.
