- D12.2 Methanol storage consist of two (2) tanks, each with a capacity of approximately fifty (50) cubic metres and deliveries will normally be full truck loads.
- D12.3 The Contractor shall confirm each delivery with the Contract Administrator or his/her designate, at least two (2) Business Days before delivery.
- D12.4 Goods shall be delivered between 8:30 a.m. and 2:00 p.m. on Business Days.
- D12.5 The Contract Administrator may assign specific days and times during which delivery of methanol is permitted. The Contract Administrator may, from time to time, adjust the assigned days and times to meet operational requirements.
- D12.5.1 The intent of assigning days and times for deliveries, if the City elects to do so, is to assist the Contractor and other contractors in coordinating their Work and other activities on Site. Any such schedule may require adjustments during the term of the Contract because of factors such as changes in consumption rates for various chemicals, or construction and maintenance activities.
- D12.6 The City will provide:
- (a) nitrogen gas and connection: 25 mm Air King male connector;
  - (b) methanol fill connection: 75 mm Camlock male connector;
  - (c) grounding connection to the truck hose;
  - (d) emergency shower and eyewash station.
- D12.7 Each truck shall be equipped with:
- (a) its own unloading system (typically a truck mounted pump) which:
    - (i) is manually controlled by the Driver;
    - (ii) has a pump discharge with pressure indicating device to detect any high pressure and able to shut off the pump if higher than pre-set pressure is detected;

- (iii) has an unloading line with a connection to nitrogen purge gas with an isolation valve.
  - (b) any additional equipment required, including but not limited to:
    - (i) hoses and/or adapters suitable to connect to the City's chemical unloading point;
    - (ii) straps or other securing devices to restrain hoses to prevent blow-out;
    - (iii) personal protective equipment for the Driver.
- D12.8 The Contractor shall off-load goods as directed at the delivery location.
- (a) The Driver shall unload methanol from the truck to the City's storage tanks with the assistance of a City Operator.
- D12.9 Unloading shall be in accordance with the Contractor's procedures. The following procedure is intended to identify **minimum requirements** and to outline responsibility for tasks:
- (a) The Driver shall verify the emergency shower and eyewash station works properly before any unloading operation.
  - (b) The Driver and the City Operator shall wear personal protection equipment (PPE) required all through the unloading event.
  - (c) The City Operator shall close the valve CV-702 located in the valve chamber.
  - (d) The Driver shall connect the grounding cable to the truck.
  - (e) The Driver shall verify that "SYSTEM READY" in the control panel is "on", indicating the total available spare capacity in the storage tank is greater than a preset volume (enough to accommodate full truck/trailer volume plus safety margin).
  - (f) The Driver shall connect the nitrogen purge line to the unloading line.
  - (g) The Driver shall connect the methanol hose to the fill pipe to the storage tanks.
  - (h) The Driver shall start the unloading by press the "START UNLOADING" button in the control panel.
  - (i) The Driver shall stay close enough to the pump to reach and turn off the pump in no more than five (5) seconds if an alarm is issued, or an emergency is identified.
  - (j) Unloading normally continues until the truck is empty. The Driver shall manually stop the unloading by pressing the "STOP UNLOADING" button in the control panel.
  - (k) Unloading can be manually stopped in progress, by pressing the "STOP UNLOADING" button in the control panel (or at any time when the Driver or the City Operator identifies any problem which require a stop to the unloading.
  - (l) If the control system initiates alarms at conditions such as detecting high level in the tank, or low conductivity for grounding, etc., the Driver shall stop the unloading by turning off the truck mounted pump. Where the alarm is for high level, the flow will be diverted to an alternate tank if that tank is low by opening and closing the actuated valves in the fill lines.
  - (m) Resuming unloading after an emergency stop or safety shutdown may require bypassing of the "SYSTEM READY" interlock. The control system does not turn on the "SYSTEM READY" light because the chemical level may no longer be low enough. In this case, the Distributed Control System (DCS) operator is provided with a non-latching override for the "SYSTEM READY" permissive. Unloading is resumed by pressing the local start button again and restarting the blower if it was stopped.
  - (n) Once the unloading is finished, the Driver shall open the valve (CV-701A) in the nitrogen purge line and then that valve attached to the truck unloading line, to blow off residual methanol in the unloading line for five (5) to ten (10) seconds. Then close the valves reversely. Then disconnect the nitrogen hose.
  - (o) The Driver shall open the CV-700 and disconnects the unloading hose.
  - (p) The City Operator shall open the valve located in the manhole.
  - (q) The Driver shall disconnect the grounding cable.

- (r) If a spill occurs the Driver shall follow the Contractor's emergency procedure and request assistance from the City Operator.
