PART D - SUPPLEMENTAL CONDITIONS

GENERAL

D1. GENERAL CONDITIONS

D1.1 In addition to the *General Conditions for Consultant Services*, these Supplemental Conditions are applicable to the Services of the Contract.

D2. PROJECT MANAGER

D2.1 The Project Manager is:

Becky Raddatz, RPP

Telephone No. (204) 986-3107

Email Address: braddatz@winnipeg.ca

D2.2 At the pre-commencement meeting, the Project Manager will identify additional personnel representing the Project Manager and their respective roles and responsibilities for the Services.

D2.3 Proposal Submissions must be submitted to the address in B6.

D3. BACKGROUND

D3.1 The City of Winnipeg (the City) is in the process of investigating alternative management options for its municipal biosolids to meet to objectives for beneficial use outlined in the City's Biosolids Master Plan. Projects examining re-establishment of beneficial use include:

- a) a compost pilot project in which up to 20% of the annual biosolids production can be composted and used on-site; and,
- b) an agricultural land application pilot project.

D3.2 In order to address the need for additional beneficial use options, the City is undertaking a pilot project to investigate the use of biosolids and other locally available residuals to fabricate a soil for final cover on Brady Road Resource Management Facility (BRRMF). The City received approval to conduct this pilot project at BRRMF from Manitoba Sustainable Development (MSD) as a Notice of Alteration in accordance with Section 14 of the *Environment Act*, dated February 6th, 2017. This pilot project will end in spring 2018. To date, this soil fabrication pilot project has proven to be an operationally effective beneficial use option for biosolids management at the BRRMF. Further monitoring through the 2018 growing season will confirm whether the fabricated soil provides a safe and effective vegetated cover for landfill closure.

D3.3 The next step will expand on the 2017-2018 soil fabrication pilot project with soil fabrication at Summit Landfill to advancement of the pilot project at an operational scale. Summit Landfill is closed and retains a leachate management system. The City monitors surface water, groundwater, leachate, and landfill gas at this site.

D3.4 The goal of this three year pilot project is to determine if soil fabrication is a viable long term option for completing the cap system at Summit Landfill as part of the City's Closed Landfill Maintenance program. It will also serve to examine the potential for providing an all season beneficial reuse option for biosolids, and a diversion option for other residuals.

D3.5 The City will design, manage and analyze this three year pilot project. It is anticipated that Year One will require the bulk of the consulting support, with each subsequent year requiring adjustments to existing processes developed throughout the pilot project.

- D3.6 In Year One, two soil mixing operations are planned to occur: one in winter and one in warm weather conditions. Mixing operations in Year One are anticipated to last a maximum of one month each phase.
- D3.7 Mixing operations timing and volumes in Year Two and Three will be informed by results obtained during Year One.
- D3.8 The City is in discussion with Manitoba Sustainable Development about this soil fabrication study. Regulatory approvals will be managed by the City.
- D3.9 Each study year will be informed by previous results and timelines and designs may change. Year One of the study will consist of a rough timeline of:
- (a) Fall: Plan development and operational preparation
 - (b) Winter: Operational phase
 - (c) Spring: Seeding, monitoring, analysis, and preparation for second operational phase
 - (d) Summer: Second operational phase
 - (e) Fall: Annual report and preparation for next study year.
- D3.10 An interim report will be completed by the City after each operational phase.
- D3.11 A final annual report will be completed by the City at the end of each study year.
- D3.12 Feedstocks and soil mixes may change throughout the study period as new feedstocks are identified and deemed potentially beneficial to the soil fabrication operation.
- D3.13 All initial feedstocks collection and shipping to the proponent will be arranged by The City. Feedstock laboratory analysis will be provided by The City to the proponent
- D3.14 All field environmental monitoring and analysis, including soil, surface water and vegetation samples will be arranged by The City. Results will be provided to the proponent.
- D3.15 Biosolids monitoring program information will be provided by the City to the Proponent.
