QUESTIONS AND ANSWERS

- Q1 One of the components is to have a web-based front end for users. Does the idea of using a downloadable application by the user be something that could be considered as a suitable alternative to a web-based client?
- A1 Specifications ask for both a website and a mobile app as means for users to interact with the Lane Closure System to ensure that the system is accessible as widely as possible. According to business requirements, and resulting system design, we will not be able to accept a downloadable application as an alternative to web-based client.
