E5. OPERATING CONSTRAINTS FOR WORK IN CLOSE PROXIMITY TO FEEDER MAINS

E5.1 Description

- (a) This Section out in close details operating constraints for all work to be carried proximity to the City feeder mains and other critical water infrastructure. Close proximity shall be deemed to be any construction activity within a 5 m horizontal offset from the centreline of the feeder main, within 5 m of valve chambers and other appurtenances, and any other infrastructure identified below.
- (b) The following shall be considered critical pipelines and water infrastructure for this project;
 - (i) Second Branch Aqueduct
 - (ii) Fort Garry-St. Vital Feeder main

E5.2 General Considerations for Work in Close Proximity to Feeder Mains

- (a) Feeder mains are a critical component of the City of Winnipeg Regional Water Supply System and work in close proximity to feeder mains shall be undertaken with an abundance of caution. Feeder mains cannot typically be taken out of service for extended periods to facilitate construction and inadvertent damage caused to the pipe would likely have catastrophic consequences
- (b) Large diameter pressure pipe generally has limited ability to withstand increased earth and live loading. Therefore, every precaution must be undertaken to ensure that applied loading during all phases of construction is within accepted loading parameters. PCCP

typically fails in a non-ductile mode and has the potential to cause extensive consequential damage to infrastructure if failure should occur.
