- E4.3.1 Chemicals shall not be applied during periods of rain, or if rain is expected within 12 hours of application, or where the surface to be sprayed is in a saturated condition, or where in the opinion of the Contract Administrator it is impractical to carry out the operation.

### **E5. TANK TRUCK EQUIPMENT**

- E5.1 The pressure distributor shall be propelled by a power unit capable of accurately maintaining any speed required for spraying and shall be provided with the following minimum equipment:
- (a) A pump capable of developing a constant uniform pressure in the spray bar;
  - (b) A rear or centre-mounted spray bar having a positive and instant shut off, which can be set parallel to the surface. The spray bar shall be at least 2.4 m wide and shall be equipped with a pressure gauge accurate to 15 kPa;
  - (c) Spray bar nozzles, which shall ensure uniform fan shaped spray without atomization, shall all be of the same manufacturers and size. Nozzles shall be set in the spray bar at angles which will allow each spray pattern to overlap the other in such a manner that should there be a malfunction of one nozzle, the nozzle on either side would substantially spray the area which would otherwise be missed. However nozzles shall be cleaned immediately;
  - (d) A strainer installed in the feed system to prevent clogging of the spray bar and nozzles;
  - (e) A transparent standpipe shall be located at the front or the rear of the tank and be accurately graduated in 500 litre increments so as to be able to verify quantities delivered and distributed. Provision shall be made to allow the Contract Administrator to verify the accuracy of the increments on the standpipe;
  - (f) When shoulder spraying, splash guards or other approved devices shall be provided which will permit spraying immediately adjacent to the pavement without spraying on the pavement surface;
  - (g) A warning light shall be mounted on the vehicle roof or in an elevated position so as to be visible to traffic and shall be operating when the distributor is working or stopped on the roadway;
  - (h) A spray monitor or an automatic rate controller system readily visible and accessible to the Contract Administrator. The spray monitor and controller shall be calibrated for the type of material being applied.
    - (i) The Contractor's distributor must be equipped with a metering system, capable of determining variable application rate (e.g. in litres per square meters), and readily visible and accessible to on-site staff; and

- (ii) The Contractor shall specify the variable rate metering system in the Tender and the Contract Administrator shall approve the system before awarding the Tender.
