FORM M: SOCIAL PROCUREMENT PLAN

Every purchase has an economic, social, environmental, and cultural impact. Sustainable Procurement is about capturing the economic, social, environmental, and cultural impacts of purchasing decisions to foster healthy and vibrant communities.

Historically, procurement has been about choosing the supplier offering the lowest price while still meeting technical requirements of providing high quality products or services with minimal risk. By expanding the premise of 'best value' in procurement, to include the generation of positive societal benefits, alongside high quality and competitive bids, the City of Winnipeg is working to maximize community benefits and deliver improved socio-economic returns for stakeholders, within the existing spend.

The Contractor shall provide the Contract Administrator with a Social Procurement Plan Template (Form M: Social Procurement Plan Template) within five (5) Business Days of a request by the Contract Administrator as per B13.1(d).

Both Question 1 and 2 must be filled out responding to all criteria. Question 2 must explain the commitment to Question 1 within the context of the Contract.

1. The Contractor commits to _____ % of employment hours with Equity Groups on the delivery of this Contract.

$$X\% = \frac{\text{\# of employment hours by Equity Groups on this Contract}}{\text{Total \# of employment hours on this Contract}}$$

Please reconfirm your commitment here.

2. Provide a detailed strategy for how the Contractor's current and planned efforts to employ Equity Groups will ensure the Contractor meets the commitment on the Contract.

Employment responses could include: We partner with Equity Group employment organizations to recruit Indigenous Rightsholders and other Equity Groups. When employees are onboarded, they are asked if they identify as an Indigenous Rightsholder or Equity Group. We track this and report on aggregate employment levels across our business each year per our Diversity and Inclusion Policy.

Please describe your strategies and/or plans to meet the above requirements.

FORM N: EMPLOYEE VOLUNTARY SELF-IDENTIFICATION SURVEY

- E12.13 Upon completion of the Works within the CPKC right-of-way, including disinfection and flushing, there may be Working Days where no work is able to be completed while awaiting bacteriological samples. In the event that no work is able to be completed while awaiting bacteriological sample results, these days will not be considered Working Days until results for bacteriological samples have been received. Once received, Working Days will re-commence on the next available Working Day so that final tie-in(s) and restoration works can be completed.
- E12.14 Should approvals be in place with CPKC, and installation of Works within the CPKC right-of-way are unable to be completed in 2024 due to delays by the Contractor, no additional Working Days will be added to Total Performance timelines, and consideration for Substantial Performance being issued in 2024, payment for temporary connection to existing CPKC pipe crossing, or payment for temporary road asphalt restorations will not be made. Any additional costs as a result of delays by the Contractor shall be incidental to the Works and be the responsibility of the Contractor.

E13. WORKING IN CLOSE PROXIMITY TO A FEEDER MAIN

- E13.1 Prior to any construction, exploratory excavations at the existing 600 mm feeder main on Sargent Avenue, in accordance with E14, are to be completed so as to confirm depth and location of the feeder main, for any location where works are to be completed within close proximity to the existing feeder main. Depending on depth, location of existing feeder main in proximity to proposed excavations, and existing soil conditions, Consultant will determine if engineered shoring is required in accordance with E15.

- E13.2 Close proximity will include any excavation within five (5) metres of the existing feeder main location shown on the drawings.
- E13.3 Granular material, construction material, soil or other material, shall not be stockpiled on the feeder main or within five (5) metres of centreline of the feeder main.
- E13.4 Stage construction such that the feeder main is not subjected to significant asymmetrical loading at any time.
- E13.5 Where work is in close proximity to the feeder main, utilize construction practices and procedures that do not impart excessive vibration loads on the feeder main or that would cause the settlement of the subgrade below the feeder main.
- E13.6 Concrete demolition and removal within five (5) metres horizontally of the feeder main shall be completed by saw cutting and removal, or use of handheld jack hammers. Use of machine mounted concrete breakers within five (5) metres of a feeder main shall not be permitted.

E14. EXPLORATORY EXCAVATIONS AT FEEDER MAIN

- E14.1 Concrete demolition and removal to be in accordance with E13.6
- E14.2 Excavations deeper than one (1) metre shall be done using vacuum excavation methods to minimize the potential for any damage to the feeder main. The purpose of exploratory excavations at feeder main is to determine the excavation method to be used to install new watermain infrastructure within close proximity, as defined in E13.2, to the existing feeder main. Depending on the depth of the excavation required to install the works in relation to the existing feeder main, the following excavation methods shall be implemented:
- (a) Where the excavation elevation is higher than one (1) metre above the crown elevation of the feeder main pipe, excavations by normal methods with a backhoe/excavator will be permitted.
 - (b) Where part of the excavation elevation is located within one (1) metre of the crown elevation of the feeder main pipe, excavation using a backhoe/excavator will be permitted to a depth of one (1) metre above the crown of the feeder main. Excavation below this depth must be by soft digging / vacuum excavation methods only.
 - (c) Where part of the excavation elevation is located below the crown elevation of the feeder main pipe but higher than the invert elevation of the feeder main pipe, a higher standard of care is required to minimize the impact on the feeder main. Excavation using a backhoe/excavator will be permitted to a depth of one (1) metre above the crown of the feeder main. Excavation below this depth must be by soft digging / vacuum excavation methods only. Shoring and bracing may be required to minimize the loss of soil or bedding material from around the feeder main.
 - (d) Where part of the excavation elevation is located below the invert elevation of the feeder main pipe, a very high standard of care is required to minimize the impact on the feeder main pipe. The excavation must be completed as described in E14.2c, however, engineered shoring must be installed in the excavation shaft to minimize disruption to the feeder main. Engineering Shoring must comply with E15.
- E14.3 Backfill for excavations within close proximity to the feeder main to be done in accordance with CW 2030, using Class 2 backfill. Flood tamping is not permitted in a zone within 2.5 m (horizontal offset) from the edge of the feeder main pipe. Granular backfill shall be placed and mechanically compacted in maximum 300 mm thick lifts. Mechanical compaction equipment is limited to walk behind vibratory compactors only. Compaction using a backhoe / excavator bucket is not permitted due to the potential for over-compaction and vibration.
- E14.4 Exploratory excavations of the feeder main for excavations in close proximity shall be measured on a unit basis per exploratory excavation required and paid for at the Contract Unit Price of "Exploratory Excavation at Feeder Main" in Form B of the Bid Submission.

E14.5 Any additional costs associated with excavation in close proximity to a feeder main, backfilling, or restoration shall be incidental to the cost of the watermain renewal and will be included in the Contract Unit Price bid for "Watermain Renewal" in Form B of the Bid Submission.

E15. ENGINEERED SHORING

E15.1 The type, strength, and amount of shoring and bracing shall be such as the nature of the ground and site conditions may require to protect the feeder main from loss of bedding material below the pipe springline.

E15.2 All material used for shoring construction shall be in a like-new condition, and shoring and bracing shall be so spaced and dimensioned as to prevent caving, loss of ground, surface settlement, or squeezing of the soil beyond the neat lines of the excavation. Shoring material shall be free from defects that might impair its strength or suitability for the Work.

E15.3 Prepare design calculations as required to facilitate review of the submission for conformance with the Contract Documents.

E15.4 Submit Shop Drawings and design calculations for the shoring/excavation system designed and sealed by a Professional Engineer registered and licensed to practice in the Province of Manitoba, and experienced in the structural design of shoring systems. The designer of the shoring system shall inspect the system during construction and certify, in writing to the Contract Administrator, that construction is in conformance with the approved design.

E15.5 Shoring and bracing shall be removed in stages while backfilling the excavation.

E15.6 All work associated with the design and provision of engineered shoring to protect the feeder main shall be measured on a unit basis per excavation requiring engineered shoring and bracing, and paid for at the Contract Unit Price of "Engineered Shoring" in Form B of the Bid Submission. Requirement for engineered shoring will be determined by the Contract Administrator based on the findings of the "Exploratory Excavations at Feeder Main" completed by the Contractor in accordance with E14.

E16. CROSSING THE FEEDER MAIN

E16.1 All water mains and water services crossing the feeder main must maintain a minimum clearance of 0.5 metres between the top of the feeder main and the bottom of the water main or water service pipe, or a minimum clearance of 1.0 metres between the bottom of the feeder main and the top of the water main or water service pipe, or as stated by the Contract Administrator.

E16.2 A shaft must be excavated in accordance with E14, four (4) metres from the centreline of the feeder main to confirm the alignment and elevation of the drilling rod before it crosses the feeder main. This confirmation must be witnessed by a City of Winnipeg Water and Waste representative designated by the Contract Administrator.
