## Appendix A Facility Codes

Each City of Winnipeg facility is assigned a unique, four-digit facility code. The facility code is to be used on drawings and documentation as required. The facility code appears within all City drawing numbers, but need not be shown within the content of the drawing. The facility code is deemed an optional component of equipment and instrument identifiers, with the preference to omit the facility code to reduce the overall length of identifiers.

Systems such as a central Supervisory Control and Data Acquisition (SCADA) system that monitors multiple facilities are to make use of the facility code to segregate components by facility. The implementation of the facility code may be by means of a hierarchical directory system whereby individual components are stored under a folder that is named by the facility code. If the database or system where the identifier is being stored supports an additional field for the facility code, or is based upon a hierarchical system where the identifier can be placed as a component off of a root facility branch, it is deemed to be acceptable to omit the facility code in the instrument identifier. For example, the City's current Computerized Work Management System (CWMS) has an integral asset list, where a field is provided for the facility. In this case, the facility code for the equipment identifier would not be entered.

### A.1 Project Facility Codes

It is the responsibility of the Project Manager to notify Drawing Control and Underground Structures (UGS) Approval Process Technologist from the Design and Graphics Branch (D&G) of any consultant or in-house projects requiring City drawings numbers during the Planning phase of a project. In the email, provide the project name, description of the project and the anticipated deliverables (drawings), facility code(s) and any applicable area codes.

#### A.1.1 Creating New Facility Codes

It is the responsibility of the Project Manager to notify the WWPPD when a new facility code is required for a project. Request a new facility code by emailing WWPPD (cc. Drawing Control and UGS Approval Process Technologist from D&G) the following information:

- Project name
- Description of the project
- Proposed facility code name
- Type of facility (i.e. Collection Facility)

A review of the request will be undertaken by WWPPD in consultation with D&G and appropriate business unit (if required). WWPPD will update the Facility Codes Document and send an email with the assigned facility code to D&G and the Project Manager.

#### A.1.2 Revising Existing Facility Codes

Only WWPPD can revise the WWD Facility Codes. If it is determined that a facility code needs to be revised, Project Managers should send an email to the WWPPD (cc. Drawing Control and UGS Approval Process Technologist from D&G) informing them of why the change is needed. Some examples that would warrant a revision include:

- Naming errors (need to align with WWD naming structure and asset categories)
- Duplication of facility codes
- Decommissioning of a facility
- Merging of two facilities
