

**THE CITY OF WINNIPEG**

# **NOTICE TO BIDDERS**

**NOTICE NO. 808-2024**

**NORTH END SEWAGE TREATMENT PLANT (NEWPCC) UPGRADES: NUTRIENT  
REMOVAL FACILITIES PROJECT**

## **Overview**

The North End Sewage Treatment Plant (NEWPCC) is the City of Winnipeg's oldest and largest wastewater treatment plant. Three major projects are underway and/or planned to meet licence requirements, update end-of-life components, and expand capacity. The first project, Design-Build of Headworks Facilities, is underway. The second project, Progressive Design-Build of Biosolids Facilities, is underway. The third project, Nutrient Removal Facilities, is the subject of this Notice to Bidders.

## **Project Scope and Delivery Model**

The Nutrient Removal Facilities will replace NEWPCC's existing secondary treatment system, and will be located on a greenfield site immediately to the west of the existing plant. The new secondary treatment system will biologically remove nutrients from the wastewater with minimal chemical use. It is anticipated that a progressive design-build delivery model will be used to deliver the infrastructure.

## **Schedule**

The preliminary schedule is as follows:

- Commence procurement process: Quarter 3 2025
- Contract award of Development Phase: Quarter 4 2026
- Substantial Completion: December 2032

## **Market Sounding**

A market sounding exercise is being conducted by the City as set out in EOI 809-2024, to solicit input from potential design-builders on the procurement process and design-build structure.

## **Bidder's Session**

During the procurement process, the City intends to conduct a bidder's session to provide more detailed information on the project and the bidding opportunity. The bidder's session will be announced on MERX.
