- (b) where the price of fuel has decreased - $((CFI/BFI)-0.85) \times Q \times FF$; where
 - (i) BFI = base fuel index
 - (ii) CFI = current fuel index
 - (iii) FF = fuel factor
 - (iv) Q = monetary value of Work applied in the calculation.

D32.1.1 Eligible Work will be determined in accordance with D32.5.

D32.1.2 The base fuel index (BFI) will be the retail price of fuel identified on the Submission Deadline based on latest published "Monthly average retail prices for gasoline and fuel by geography" for Winnipeg, published by [Statistics Canada, Table 18-10-0001-01](#). The BFI is a blended rate based on 15% regular unleaded gasoline at self-service filling stations and 85% diesel fuel at self-service filling stations.

D32.1.3 The current fuel index (CFI) based on the above blended rate will be determined for each monthly progress estimate and applied on the following progress estimate as a change order once rates are published by Statistics Canada.

D32.1.4 A Fuel Factor (FF) rate of the monetary value of all eligible Work completed that month based on the Contract unit prices will be used to calculate the assumed apportioned cost of fuel.

- D32.2 Fuel cost adjustments may result in additional payment to the Contractor or credit to the City within the Contract by way of a monthly change order.
- D32.3 The fuel escalation or de-escalation adjustment will not be applied if the CFI is within $\pm 15\%$ of the BFI.
- D32.4 Fuel escalation adjustments will not be considered beyond the Substantial Performance/Critical Stages except where those dates/Working Days are adjusted by change order. Fuel de-escalation adjustments will apply for Work that extends beyond the dates/Working Days specified for Substantial Performance/Critical Stages.
- D32.5 The Fuel Factor (FF) rates will be set as follows:
- (a) The Fuel Factor rate shall be set at 2.7% of the monetary value of all Work based on unit prices except for the portions of the Contract identified below;

The Contractor is responsible for supplying, setting up and maintaining temporary pressurized water supply. No additional measurement or payment will be made for the supply, installation or maintenance of temporary pressurized water supply.
- E11.5 The Contractor shall be required to submit a work plan satisfactory to the Contract Administrator seven (7) days prior to any construction activities to illustrate how the work will be performed to minimize or eliminate water shutdowns for this project. The plan will be reviewed by the Contract Administrator and revised by the Contractor as required.
- E11.6 No additional payment will be made for measures taken to minimize water services disruptions.

E12. WORK PRACTICES ON ASBESTOS-CEMENT PIPE

- E12.1.2 "Recommended Work Practices for AC Pipe", 1977, published by the AC Pipe Producers Association.

E13. FLOOD PROTECTION DIKE – CEMENT-BENTONITE FILL

- E13.1 Description
- (a) This Special Provision shall cover all aspects of backfilling excavations through the Primary Line of Defense (PLD) dike (i.e. Scotia Street) at select locations identified by the Contract Administrator, including the supply, hauling and placement of Cement-Bentonite (CB) slurry fill.
- (b) The work to be done by the Contractor under this Special Provision shall include the furnishing of all superintendence, overhead, labour, materials, and all things necessary for and incidental to the satisfactory performance and completion of all work as hereinafter specified.
- E13.2 Description
- (a) General
- (i) The Contractor shall be responsible for the supply, safe storage and handling of all materials set forth in this Special Provision.

- (b) Cement-Bentonite Slurry Fill
- (i) The CB fill shall consist of self-consolidating cement-bentonite slurry providing a continuous homogeneous and relatively impervious backfill.
 - (ii) The CB fill shall be constructed to the lines, grades, and depths indicated on the Drawings.
 - (iii) Bentonite shall be a natural untreated, naturally powdered, pure, premium grade, Wyoming-type, sodium cation-based bentonite with high swelling characteristics, containing a minimum of 90% montmorillonite clay that conforms to the American Petroleum Institute (API) Standard 13A Section 9 "Specifications for Drilling-Fluid Materials".
 - (iv) Cement shall be Type GU.
 - (v) Water shall be clean, fresh and free of silt, oil, organic matter or other deleterious substances.
 - (vi) The slurry shall consist of a mix of water, bentonite, cement, and shall satisfy the following requirements.
 - ◆ The proportion of bentonite shall be a minimum of 4%
 - ◆ The proportion of cementing materials shall be between 11% and 16%
 - ◆ The maximum nominal aggregate size shall be 5 mm.
 - ◆ Coefficient of permeability shall be less than 1×10^{-6} cm/s after 28 days cure time.
 - ◆ Unconfined compressive strength shall be greater than 0.5 MPa after 28 days cure time.
 - ◆ The marsh funnel viscosity shall be within 5% of the selected trial batch mix.
 - (vii) The mix design, including any admixtures for the slurry shall be the responsibility of the Contractor and shall take into account the subsurface conditions.
 - (viii) The compliance of the design mix with the above requirements shall be demonstrated with tests conducted through a trial batch program. The Contractor shall hire an accredited and qualified test laboratory to conduct the trial batch program. The minimum tests to be conducted are:
 - ◆ Marsh funnel viscosity
 - ◆ 2 Coefficient of permeability after 14-day cure time
 - ◆ 1 Unconfined compressive strength at 7 days for the mix design
 - ◆ 1 Unconfined compressive strength at 14 days for the mix design.
 - (ix) The trial batch program shall commence at a date such that test results including tests that require 14-days cure time, can be reviewed a minimum of 14 days before commencement of construction of the CB backfill.

E13.3 Submittals

- (a) The Contractor shall submit details of the mix design for the CB slurry including the minimum specified strength, and the proportions of cement and bentonite.
- (b) The Contractor shall submit information documentation or cut sheets for all commercially procured materials.
- (c) The Contractor shall submit the product name including data sheets for all intended admixtures.

E13.4 Equipment

- (a) The Contractor shall submit in writing the intended equipment for batching and placement of the CB backfill.

E13.5 Construction Methods

- (a) General

- (i) Placement shall commence at the area having the lowest foundation elevation.
 - (ii) Fill shall not be placed in a frozen condition and shall not be placed on a surface which is frozen or covered with snow or ice. Placing of fill in freezing weather will only be permitted if proper measures are taken to prevent freezing of the fill and foundation material and when approved by the Contract Administrator.
- (b) Placement
- (i) All CB fill shall be placed in the dry under dewatered conditions to the lines and grades as shown on the Drawings. The material shall be placed in such a manner to achieve a stable and homogeneous fill which is free of horizontal stratifications and lenses or pockets of pervious materials, and from lumps of materials that do not satisfy the requirements of these Special Provisions. Care shall be taken during placement to prevent contamination by mixing with adjacent granular materials.
 - (ii) CB fill shall be deposited directly from a mixing truck into the excavations. The CB fill shall be placed continuously to avoid premature setup of the mix and the introduction of cold joints.
 - (iii) The CB fill shall be protected against freezing and drying with plastic sheets and approved insulation both during placement and curing. Where the minimum temperature cannot be maintained, the Contractor shall use heaters and hoarding to provide the supplemental heat.
 - (iv) The CB fill shall be overbuilt as shown on the Drawings above the design finished surface elevation of the backfill. The overbuild is to account for the trimming of desiccated material.
 - (v) After a curing period of at least 3 days, the CB fill surface shall be trimmed with a straight-edge to remove desiccated, fissured, or frozen material. The resulting surface shall be inspected prior to final restoration to grade.
- (c) Quality Assurance Testing Frequency
- (i) The Contractor shall adhere to the minimum inspection and testing frequencies specified as follows:

Test Activity	Minimum Inspection / Test Frequency
Marsh Funnel Viscosity	Confirmation test once per batch.
7-day Unconfined Compressive Strength	Confirmation test once per source.
28-day Unconfined Compressive Strength	Confirmation test once per source.
28-day Permeability	Confirmation test once per source.

E13.6 Method of Measurement

- (a) CB fill will be measured on a volume basis. The volume to be paid for shall be the total number of cubic metres of CB fill material supplied and placed in accordance with this Special Provision, as measured in the field, and accepted by the Contract Administrator. The volume of CB Fill shall be measured by using neat line average end areas for any placed surfaces that are determined by the Contract Administrator.

E13.7 Basis of Payment

- (a) CB Fill will be paid for at the Contract Unit Price for "Flood Protection Dike – Cement-Bentonite Fill", measured as specified herein, which price shall be payment in full for the placement of all materials and performing all operations herein described including the trial batch program and all other items incidental to the Work included in this Special Provision.
