E9. OPERATING CONSTRAINTS FOR WORK IN CLOSE PROXIMITY TO CRITICAL INFRASTRUCTURE

E9.1 Description

E9.1.1 This section details operating constraints for all Work to be carried out in close proximity to the Interconnector Aqueduct, MacLean RPS suction inlet and discharge piping, valve chambers, and other critical water infrastructure.

E9.2 The following shall be considered critical pipelines and water infrastructure for this Work:

- (a) Valve Pits:
 - (i) LAV-1, LAV-2, LRV-1, and LRV-2;
- (b) Pipes:
 - (i) the Aqueduct Interconnector is a one thousand three hundred fifty (1,350) millimetres (mm) pre-stressed concrete cylinder pressure pipe circa 1964. The Aqueduct Interconnector is installed below grade and to the west of the slope of the MacLean Reservoir. The depth of burial is approximately 1.2 m to 1.5 m below grade to the overt of the pipe (Historical Reference Drawing ME-57 in Appendix ‘A’);
 - (ii) MacLean RPS South Suction Header is a one thousand five hundred (1,500) mm pre-stressed concrete cylinder pressure pipe circa 1964. This suction header is installed from the south face of the MacLean RPS to the MacLean Reservoir Valve House and is approximately 4.2 m below grade in front of the MacLean Reservoir Valve House (Historical Reference Drawings ME-46 and ME-57 in Appendix ‘A’); and
 - (iii) MacLean RPS North Suction Header is a one thousand five hundred (1,500) mm pre-stressed concrete cylinder pressure pipe circa 1964. This suction header is installed from the northeast face of the MacLean RPS to the MacLean Reservoir Valve House and is approximately 4.2 m below grade in front of the MacLean Reservoir Valve House (Historical Reference Drawings ME-46 and ME-57 in Appendix ‘A’).

- E9.2.1 For further clarification of this buried infrastructure and other supporting buried infrastructure see Appendix 'A' Drawings ME-46, ME-49, and ME-57.
- E9.2.2 All Work procedures conducted by the Contractor on and/or near the Aqueduct Interconnector, RPS suction headers, reservoirs, and valve chambers shall be well planned and executed to ensure that these systems are not subjected to construction related loads, including excessive vibrations and concentrated or asymmetrical lateral loads.
- E9.3 General Considerations for Work in close proximity to critical pipelines and water infrastructure
- E9.3.1 General
- (a) Light duty trucks, and service vehicles will be permitted adjacent to the valve chambers.
 - (b) Heavy equipment and cranes will not be permitted to operate directly over or within three (3) m of the centreline of piping.
 - (c) Under no circumstances will traffic or equipment be permitted on the buried MacLean Reservoir structure or adjacent valve chambers.
 - (d) No Work shall commence at the Site until the Submittals in Section E9.4.1 have been submitted and accepted, and the infrastructure locations have been clearly delineated in the field. Work over the pipes shall only be carried out with equipment that has been reviewed and quantified in terms of its loading implications on the pipe. All proposed construction equipment must be submitted to the Contract Administrator and City for review prior to construction. Work in areas in close proximity to the pipes shall only be carried out with equipment that has been reviewed and quantified in terms of its loading implications by the Contract Administrator and the City.
 - (e) Where Work is in close proximity to the pipes, utilize construction practices and procedures that do not impart excessive vibration loads on the pipes or that would cause settlement of the subgrade below the pipes.
 - (f) Granular material, construction material, soil or other material shall not be stockpiled on the pipelines or within five (5) m of the pipe centerline.
 - (g) Construction operations should be staged in such a manner as to limit multiple construction loads at one time.
 - (h) The Contractor and all Site supervisory personnel and equipment operators shall be formally briefed to ensure that they are fully cognizant of the associated restrictions, constraints, and risks associated with working adjacent to and over this critical infrastructure. New personnel introduced after commencement of the project need to be formally orientated as to the significance and constraints associated with working over the critical infrastructure.
- E9.3.2 It is the Contractors' responsibility to ensure that all work crew members understand and observe the requirements of E9.2 and E9.3. Prior to commencement of on-Site Work, the Contractor's superintendent, foreman and heavy equipment operators shall attend an orientation meeting that will outline restrictions for working on and around the critical infrastructure. Failure to comply with these restrictions will be grounds for removing the offending personnel from the Site.
- E9.4 Submittals
- E9.4.1 Submit proposed construction equipment Specifications which exceed the capacity of a standard 3/4 ton truck or will cause excessive ground vibrations to the Contract Administrator for review a minimum of ten (10) Business Days prior to construction. The equipment submission shall include:
- (a) equipment operating and payload weights;
 - (b) equipment dimensions, including: wheel or track base, track length or axle spacing, track widths or wheel configurations; and

(c) load distributions in the intended operating configuration.

E9.4.2 Submit a construction method statement to the Contract Administrator a minimum of ten (10) Business Days prior to construction. The construction method statement shall contain the following minimum information:

(a) Proposed construction plan including routes, crane equipment locations, and loading positions.

E9.4.3 Incomplete or partial submissions will not be reviewed and will be returned to the Contractor for re-submission.

E9.4.4 Allow five (5) Business Days for review by the Contract Administrator and the City.
