

May 9, 2017

Attention Business Owners:

Upcoming Construction on Donald Street Between Notre Dame Avenue and Portage Avenue June through October 2017

On June 8, 2017, we will begin a five-month project to replace the aging water main and the pavement on Donald Street between Notre Dame Avenue and Portage Avenue.

The work will be done in two phases:

PHASE ONE – WATER MAIN RENEWAL FROM JUNE 8 - JULY 27, 2017

Interruption of service

We will do everything we can to maintain your water service throughout construction.

It is possible that we will need to interrupt your water service. If this happens, we will give you advance notice. We will:

- try to schedule this after regular business hours (evenings, weekends)
- provide you with a temporary water supply by connecting a temporary overland hose to your outside tap (to attach this hose, we will need to enter your property)

It is also possible that we will have to interrupt your water service without warning. If this happens, we will restore your service as quickly as possible.

Even though we flush and disinfect the new water main once it is installed, you may find that the water tastes a little different and is cloudy. This is common after a water main renewal. You can use the water and there is no need to take special precautions. The water will return to normal within a few days.

For more information on drinking water quality, visit our website at winnipeg.ca/waterquality.

Traffic restrictions

During construction, traffic restrictions will include:

- two southbound lanes open to traffic only
- limited sidewalk access due to safety concerns
- no loading zones or street parking

You will have access to private approaches and parking lots at all times.

PHASE TWO – ROAD RECONSTRUCTION FROM AUG 14 – OCT 27, 2017

Funding for the above street renewal project has been approved for construction this summer as part of the 2017 Regional and Local Streets Program.

The work will include:

- pavement reconstruction
- renewal of sidewalks according to accessibility design guidelines
- streetscape enhancements
- improved street lighting

During Construction

- a minimum of one lane of traffic southbound shall be maintained
- limited sidewalk access due to safety concerns
- no loading zones or on-street parking

Access to private approaches and parking lots will be maintained to the extent possible. Any interruptions to access will be reviewed with the applicable property owner prior to the disruption.

Garbage and recycling collection access will be coordinated during construction.

Update

We will provide an update on the pavement reconstruction and traffic restrictions in June, 2017.

Questions

If you have any questions or concerns about the water main work in Phase one, please contact Ray Offman, Project Consultant with KGS Group Consulting Engineers:

- by phone at 204-896 - 1209

If you have any questions or concerns regarding the road reconstruction in Phase two, please contact Ms. Tanya Worms, Project Consultant and Transportation Engineer with AECOM Canada Ltd:

- by phone at 204-928-9210.

Outside of regular business hours, please call 311 with any project concerns.

We understand that this project may cause you some inconvenience. We appreciate your patience.
