Where are the CSO drains located along the Assiniboine river? Also, when are sewer upgrades planned for the Osborne Village area? Since my building has had three major sewage/flooding events in less than six weeks, it's time for the city to take immediate action. Bike lanes and rapid transit might be sexier, but the residents of the five units here have been living in deplorable conditions for close to two months now. Restoration is starting but we need protection from another event.

A map of the CSO outfalls (drains) can be found [here](#).

Currently, there is no planed Basement Flood Relief Program for the Osborn Village Area.

The City recommends that all properties protect themselves from sewer backup. This page provides information on [how to protect your property](#) and this page provides information on the [City's subsidy program](#) for residential buildings.
